IMMUNOHISTOCHEMISTRY PRODUCT CATALOGUE

Fully-automated Immunohistochemistry Staining Instrument
Primary Antibody
Secondary Antibody

Fully-automated Immunohistochemistry Staining Instrument

Efficient, flexible and stable pathological staining platform.

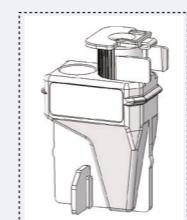

INSTRUMENT STRUCTURE

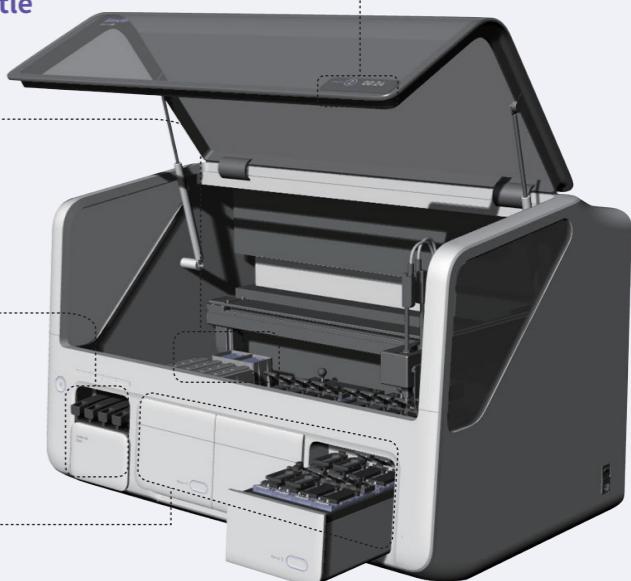

Display
Show remaining time

Conical bottom reagent bottle
Reagent residues are minimized
Reduce reagent waste

Reagent cavity
4 independent reagent racks (10^4)

Sample cavity
36 staining modules are divided into 3
independent staining cavity

Uninterrupted Operation

During operation, slides can be loaded continuously without interfering with existing staining procedure.

Liquid Monitoring

Buffer real-time monitoring of the remaining liquid volume, reminding the user to add buffer and dispose of waste liquid in time.

Run Offline

The staining program continues to run when the device is disconnected from the software.

Parallel Expansion

One computer can control 5 instruments, saving space.

WORK PROCESS

KEY TECHNOLOGY

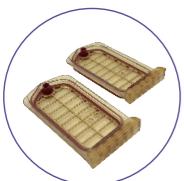

Independent temperature control technology for each slide

- 36 staining modules are equipped with independent heating modules.
- Temperature control range from room temperature to 101°C, accurate and uniform temperature control, temperature fluctuation <0.5°C.

Wave-like mixing technology

- The liquid on the surface of the slide moves in waves to improve the antigen-antibody reaction, shorten the staining time, and ensure thorough cleaning.
- The motor drives the cover plate through the worm gear, and the cover plate can be opened to a larger angle, which is convenient for maintenance and cleaning.

Independent liquid cover film technology

- works long with IHC staining
- Improve reaction efficiency and ensure staining quality

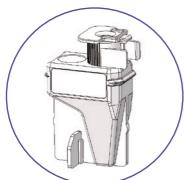

RFID chip technology

- Reduce the pre-treatment time of the experiment, and place the reagent bottle without restriction.
- 40 reagent bottles are equipped with independent scanning antennas, and the time to identify 40 reagent bottles is less than 10s. It is recognized when inserted, efficient and accurate.

QR code identification technology

- Using QR code technology to identify slides, slides can be placed at will
- Identify 36 slides <30s

Economical reagent design

- Only needs 130 µL to cover the whole slide
- Reduce reagent residue

Uninterrupted operation

- During operation, slides can be loaded continuously without interfering with existing staining procedure.
- In the same way as stain module.

Software Operation Interface

Secondary Antibody Reagent System

- Chromogenic reagent
- Sample release reagent
- TBS-T buffer
- Antigen retrieval buffer (PH6.0)
- Antigen retrieval buffer (PH9.0)

Technical Parameter

Item	Parameter
Instrument model	PA-3600
Appearance	Desktop
Function	Fully automated baking, dewaxing, antigen repair, staining and re-staining process.
Scope of application	IHC, ISH, CISH, FISH, Dual ICC
Slide capacity	36
Reagent capacity	40
Running time / round	< 3.5h
Temperature range	Room temperature - 101°C
Continuous loading	√
Reagent volume	≤ 130µL

Item	Parameter
Reaction kinetics	Wave-like mixing technology
Delayed operation function	√
Separate waste liquid treatment	√
Waste liquid volume	< 2L/round
Weight	135 kg
Size	1050*690*736 mm
Ambient temperature	18°C~30 °C
Rated voltage	AC220V
Input power	900 VA
Frequency	50 Hz

MENU OF IMMUNOHISTOCHEMISTRY STAINING SYSTEM

Head and Neck Cancer

Type of Cancer	Primary Antibody
Nasopharyngeal Carcinoma	CKpan
	CK5/6
	P63
	LCA
	Ki-67
	P53
	CD31
	CD34
Nasopharyngeal Angiofibroma	β -Catenin
	AR
